WHAT TO DO NOW

At your home:
- Screen doors and windows
  - Tip out, store or throw away anything that can hold water in your yard
- Kill mosquitoes every month using long-acting surface spray in dark hiding places in and around your home (see Youtube link below)

WHAT TO DO IF THERE IS ZIKA IN YOUR AREA

Delay getting pregnant
If you are already pregnant:
- Abstain from sex or use condoms throughout your pregnancy
- See your doctor for regular monitoring

For pregnant women and women planning pregnancy in north Queensland
HOW CAN YOU GET ZIKA?
• A bite from an infected mosquito in a country with Zika virus
  OR
• An Aedes aegypti mosquito bite when there is a local outbreak in north Queensland
  OR
• Having sex with an infectious partner (who may have got the virus overseas)

HOW CAN ZIKA AFFECT YOUR PREGNANCY?
• If you get Zika virus while pregnant, it can pass on to the baby, which can happen at any stage of pregnancy
• Zika virus can sometimes cause miscarriage, birth defects such as microcephaly, or other developmental problems

HOW WILL YOU KNOW IF YOU HAVE ZIKA?
• You may not feel sick at all – Zika virus can be very mild
• You may feel sick with any of these symptoms:

  RED EYES
  FEVER
  RASH
  JOINT PAIN

WHAT TO DO IF YOU SUSPECT ZIKA INFECTION
• See your GP for a check-up – you may need blood and urine tests

ZIKA IN NORTH QUEENSLAND
Zika and dengue viruses can be spread by a particular mosquito – Aedes aegypti.
Many tropical countries have these viruses. If a person who is sick with Zika virus travels to north Queensland, Aedes aegypti mosquitoes here could bite them and start an outbreak.
This mosquito breeds in containers holding water around your home. It sneaks into your home and bites quietly during the day.
Protect yourself and your family from the Zika mosquito.

There is NO vaccine or medicine for Zika so prevention is vital.
