

# Household Resilience Program

## External solid core doors

The Household Resilience Program aims to assist eligible homeowners in coastal parts of Central and Northern Queensland to improve the resilience of their homes against cyclones.

Houses built prior to 1984 in Queensland may not be built to cyclone building standards and therefore can be more susceptible to damage during a cyclone or extreme weather event.

Activities like upgrading (retrofitting) the existing roof structure, protecting the windows, strengthening the doors, and ensuring the house is well maintained, are all ways to improve the strength of our homes.

Currently there are many products on the market which do not meet the wind load requirements for external doors.

## What is eligible?

To be eligible for funding, the new external door/s must meet the following requirements:

- The new external door must be rated for external use and comply with AS 4055:2021 Wind Loads for Housing.
- A good quality lock set and hardware must be installed.
- The installer must provide Form 43, self-certification, which complies with AS 4055:2021 Wind Loads for Housing.
- If the replacement door contains glass, an approved AS 1170.2:2021 compliant debris impact screen must be installed on the exterior to protect the glass.
- Works must be completed on existing buildings to meet the program objectives of increasing cyclone resilience for buildings built prior to 1984.

## Contractor quotes

When sourcing a quote from a licenced contractor, it must contain:

- the contractor's Queensland Building and Construction Commission (QBCC) licence number.
- a reference that:
  - the design will comply with the relevant Australian Standards
  - certification for the works in the quote.
- a full breakdown of the quote, and if additional items and/or multiple improvement options are included such as:
  - a scope of works
  - engineering
  - certification
  - QBCC Home Warranty Insurance covering the full value of the quote or more (where applicable).
- any other additional information that would assist the quote assessment, such as areas not included or out of scope.

If these requirements are not provided, the quote review process will be delayed and will require clarification from the contractor.

# Approvals

If your application is approved, you will be notified by email. You will then need to enter a QBCC approved building contract with your chosen licenced contractor for the quoted works.

While works are underway, you and the contractor are responsible for coordination of the works including site safety, protection of property and temporary accommodation, as required.

Grant funds will only be paid as a lump sum on acceptable completion of the works and cannot be paid as progress payments. Funds will be paid directly to the contractor.

# Completion of the improvement works

On completion of the door replacement works, you will need to provide the following documentation to the Household Resilience Program grants team, via the grant's portal:

- **Form 43** self-certification, that the install complies with AS 4055 Wind Loads for Housing from the installer.
- **Copy of the contractor's invoice:**
  - addressed to the homeowner (full name)
  - referencing the Household Resilience Program application number
  - itemising and quantifying the works completed.
- **QBCC Home Warranty Insurance** details taken out by the contractor covering the full value of the quote or more (where applicable), prior to the work starting.

\*If these requirements are not provided, the grant payment process will be delayed and will require clarification from the contractor.

# Payment of grant funds

When the documentation has been provided, an assessor will inspect the completed works to assess if the grant funds can be released. The Household Resilience Program team will arrange for the grant funding to be paid directly to the contractor. This is expected to take 5 to 10 business days after receipt of the documentation and the onsite inspection is completed.

You will be required to pay the balance of your co-contribution, plus any additional costs for works that are not covered by the grant, to the contractor, once you are satisfied that the works have been completed in full.

# Additional benefits

After replacing external doors with more resilient doors, program participants have found additional benefits including:

- improvement in cyclone resilience
- increase in home security
- additional privacy
- improved street appeal

- support of local businesses and the building industry
- value for money
- Potential reduction in insurance premiums.

It is recommended that you contact your home insurer to find out if you are eligible for a reduction in your home insurance premium after undertaking these building improvements to increase the cyclone resilience of your home.

For more information relating to insurance premiums, speak to your preferred home insurer.
